PREFACE

This publication summarizes the frequency of use of the 7144 descriptors currently authorized for indexing technical reports in the AD collection. The descriptors are arranged alphabetically in the first section and by frequency in the second section (page 25). The frequency data cover about 427,000 AD documents spanning the interval from March 1953 through March 1966

Documents in the range of AD-1 to AD-225 000 were initially indexed by subject headings. These indexing records were converted to the descriptor system during late 1959 and early 1960 (see AD-227 000) on the basis of the descriptors appearing in the first-edition *Thesaurus of ASTIA Descriptors*, May 1960.

The conversion to the second-edition *Thesaurus of ASTIA Descriptors*, which occurred in June 1963, involved the deletion of about 2000 first-edition descriptors and the addition of 1000 new descriptors. The 2000 deletions do not represent indexing losses. In most instances a deleted first-edition term became a Use Reference to a second-edition term. For instance, eight recorded postings under the first-edition term ABACA FIBERS were reposted to the second-edition term FIBERS(NATURAL). Consequently, the relatively recent term FIBERS(NATURAL) has as its earliest posting AD-8857. On the other hand, the new second-edition term CYTOLOGY has AD-438 229 as its earliest posting.

Because of this history, DDC users desiring bibliographic searches should always negotiate their requests with DDC bibliographers to ensure adequate coverage. Since many of the terms have special definitions as used by DDC, this list is not recommended as an indexing tool. The second-edition *Thesaurus of ASTIA Descriptors* and the Supplement dated April 1964 should be consulted for definitions and scope notes.

13. ABSTRACT

This publication summarizes the frequency of use of the 7144 descriptors currently authorized for indexing technical reports in the AD collection. The descriptors are arranged alphabetically in the first section and by frequency in the second section. The frequency data cover about 427,000 AD documents spanning the interval from March 1953 through March 1966.
